

— Colorimetric modes

File_RVB

RGB (Red, Green, Blue)

Computer coding system used by default on all types of screens (computer, tablet, cell phone) to display colors.

Digital use only.

File_Q

Quadrichromy

Colorimetric mode intended for the impression thanks to the use of four colors CMYK (cyan, magenta, yellow, black) allowing to display all the chromatic range.

Print use only.

File_P

Pantone®

Universal color chart in which each color has a unique reference. That makes it possible to obtain with exactitude the color desired with the impression.

Print use only.

— Monochrome versions

File_N

Black

File in black 100%.

Use in digital and print.

File_R

Reserve (white)

The 'motif' is left in white to ensure its visibility on a colored background. It is said that the pattern is in "defonce".

Use in digital and print.

— Paint file

File_RAL

RAL color chart

This is the standard used to define paint colors in the fields of construction, industry, bodywork or road safety.
